

Product Revision Notice:LRS-200/350 Series Upper Case Revision

To improve the LRS-200/350 Series upper case fragility and upgrade product quality as well as reliability, MEAN WELL decides to replace LRS-200/350 series upper case after multiple experiments. After the replacement, the compression strength of LRS-200/350 Series upper case can be enlarged up to more than 5KG.

After this revision, product appearance is barely influenced. Furthermore, neither the installation size nor electrical specifications and safety regulations are impacted. The LRS-200/350 series will be revised after the production dated 2017/06/09 (production lot: W1706B). For the product revision this time, MEAN WELL takes in all relevant additional cost, making no adjustment on the price. Please refer to the following table for detailed revision. Shall there be any questions, please contact MEAN WELL sales representatives.
