In cooperation with MEAN WELL,
GAMMA ILLUMINATION strengthens its leadership status in
Australia's LED lighting market

Date: Feb. 20, 2019

GAMMA ILLUMINATION, with a history of manufacturing lighting products for more than 30 years, is one of the few manufacturers that first produced high-power LED lighting in Australia. With its mission "to create tomorrow's lighting solutions from today's resources" GAMMA ILLUMINATION set up offices in major cities in Australia to provide customers with high quality products and quick service. In addition, its extensive range of services covers a wide range of lighting environments, including industrial, commercial and transportation.

Many years ago, in order to find a manufacturer with high-quality LED drivers, GAMMA ILLUMINATION chose to cooperate with MEAN WELL, which had a good reputation in the market. After a long period of verification, MEAN WELL's products were proven with excellent performance, high reliability and a failure rate far below expectations. For example, the PLN series, which is widely installed in large supermarkets, and the HLG series, which is used in industrial environments, have been proven with the highest reliability.
