To exert corporate influence and contribute to society, since 2020, the MEAN WELL Foundation initiated the "LED replacement for orphanage program", selecting the LED panel light from EPOCH, the Powered By MEAN WELL (PBM) partners, as the main energy-saving products.

MEAN WELL, and EPOCH have been cooperating for more than ten years. EPOCH's LED lamps are 100% Made in Taiwan. The LED panel lights have been rewarded with many international design awards, which can be seen in many valuable enterprises and public utilities. EPOCH knows that the LED drivers are as significant as LED lamps, which is also why they chose to cooperate with MEAN WELL in the long term. The MEAN WELL power supplies fully support EPOCH to provide reliable, high quality, energy-efficient and bright LED lighting products!

In this program, we replace the light bulb with an energy-saving efficient LED panel light, which assists the social welfare organization in obtaining the goals of energy saving, carbon reduction, and social welfare. It also helps orphanages greatly reduce electricity and save children from light pollution. Many thanks to EPOCH; in 2020, we replaced 1679 lamps in 11 organizations. MEAN WELL will cooperate with more PBM partners and keep contributing to society!
